

24 December 2014

PHOSPHATE MARKET AND COMPANY UPDATE

Agua Update: Drill Program Underway

Agua's recent funding (A\$2 million with Sulliden Mining Capital Inc. in November) is being used for a comprehensive drill program to validate the resource at Três Estradas South, which is well underway. Drilling to date includes 1,012.6 meters of diamond drilling (2 rigs, 3,000 m total planned) and 585 meters of reverse circulation drilling (1 rig, 1,000 m planned).

Três Estradas South forms the south-west strike extension of the current Três Estradas in-pit resource of 30.5 million MT grading 4.3% P₂O₅¹, which includes indicated resources of 9.9 million MT @ 5.03% P₂O₅ and inferred resources of 20.6 million MT @ 3.94% P₂O₅. An exploration target of between 13 and 27 million MT, grading between 3.56 and 4.84% P₂O₅ has been defined for the Três Estradas South tenement. This assumes a strike extension of between 0.5 and 1.0km to the SW from the existing Três Estradas resource. The reader is cautioned that the potential quantity and grade estimates are conceptual in nature; that there has been insufficient exploration to define a mineral resource; and that it is uncertain if further exploration will result in the determination of a mineral resource. Once this work is completed, it is expected that an update of the conceptual mining study (from September 2014) will be prepared and the preliminary economic assessment (PEA) will be published.

The company has also initiated a new round of bench scale test work to optimize the flotation circuit, with testing to be carried out by SGS Lakefield Canada. These results will also be incorporated into the PEA.

In addition, Joca Tavares is located 41 km south-east-south from the Três Estradas project with Aguiá carrying out the only systematic work since its discovery by CPRM (the Brazilian Geological Survey).

Phosphate Rock Prices Hold Steady; Ag Commodity Prices Start to Recover

Phosphate Rock and Fertilizer Prices (\$/mt)

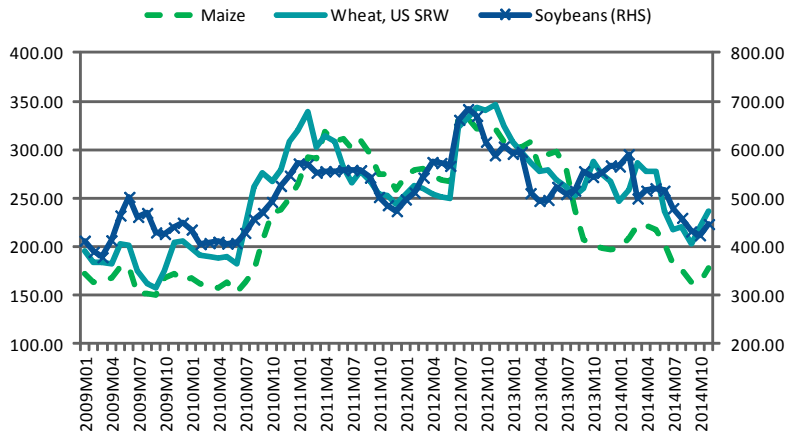

Source: Worldbank

Phosphate rock prices held steady in November at US\$115/t while DAP and TSP prices fell -3% and -1% m/m, respectively. Phosphate rock, DAP and TSP prices are now up 14%, 22% and 36% YTD. Recent data from Mosaic indicates phosphate rock prices continue to remain steady in December (MOS reports a price of US\$120/t) while DAP and MAP prices are flat to up in early December.

¹ SRK Consulting: Cut-off of 3.0% P₂O₅, as announced in March 2014 Quarterly Report

Corn, Wheat and Soybean Prices (US\$/mt)

Source: Worldbank

winter weather/crop concerns in the US and Russia.

Agriculture commodity prices have started to rebound after hitting recent lows in October. Soybean, corn and wheat prices were up +5%, +10% and +7% m/m in November and have continued to rise in early December. Soybean prices have benefited from stronger exports/foreign demand, corn prices are rebounding due to slightly lower yields and wheat prices have increased due to

However, agricultural commodity prices remain at recent historical lows. Agriculture commodity prices (soybeans, corn and wheat) were down ~15% y/y (YTD November) indicating softer farmer demand in 2014/15. As an additional reference, we have summarized the last four years of average US farm prices (US\$/bu) for corn, soybeans and wheat as per the December USDA WASDE report in the table below, which illustrates the price declines from the 2012 peak.

December WASDE Average US Farm Price (US\$/bu)

Crop Year	Corn					Soybeans					Wheat				
	Low	High	Average	Y/Y % Change	% Chg 2011/12	Low	High	Average	Y/Y % Change	% Chg 2011/12	Low	High	Average	Y/Y % Change	% Chg 2011/12

Source: USDA

Lower agricultural commodity prices create a headwind for nutrient demand, primarily due to lower farm profits. However, Mosaic continues to forecast phosphate fertilizer demand of 64-65 million tonnes DAP/MAP/TSP in 2014 and 64.5-66.5 million tonnes in 2015.

Foreign Exchange: BRL and CAD Continue to Weaken vs. USD

The CAD and BRL weakened -0.9% and -3.7% m/m, respectively, in November versus the USD. Given the recent fall in oil prices, it is expected that the Canadian dollar will weaken further. A stronger USD versus the currency of importing countries generally results in decreased demand for agricultural commodities. Fertilizer producers with operations outside the US, however, stand to benefit from a stronger USD notably if their domestic currency has depreciated. Fertilizer nutrient producers such as PotashCorp (POT-N) and Agrium

(AGU-N) should benefit from selling product in USD and operating in Canada this year. Local Brazilian producers are in a similar situation with the depreciating Real. Lower natural gas costs will also help the nitrogen producers.

Market Action

Stock prices of global fertilizer producers (notably those in North America) started to pull back after the November rally, which was primarily driven by the news of brine inflow/ shut down at Uralkali's Solikamsk-2 mine. The global fertilizer producer group is down 3.9% m/m on average. YTD, the producers are generally up (CF and Yara up 15.7% and 26.6% YTD due to lower gas costs and POT, K+S and AGU have benefited from a recent recovery in potash prices) although Uralkali is down 53.5% YTD as it faces the potential closure of a potash mine.

Junior fertilizer explorers and developers have for the most part experienced another month of decline. In phosphate, MBAC is down -85.4% YTD and -17.6% m/m (dealing with working capital issues) and Sunkar Resources de-listed from the AIM in August.

In the broader agriculture market there has been some M&A (ADM completed SCI acquisition, Deere purchased Auteq in Brazil, JBS purchased Primo Smallgoods, and CNH Industrial purchased Miller-St. Nazianz). Deere announced weak guidance for 2015 but the stock price has held up.

Agriculture ETFs showing the strongest performance have been short commodities, notably corn, wheat, soybean and sugar (i.e. AGA). Top performers have high exposure to coffee (CAFE, JO).

Brazil Phosphate Shipments and Imports Remain Strong

Data from ANDA and Mosaic indicates phosphate shipments in Brazil were down 13% m/m and down 1% y/y in October (561,000MT). YTD, P2O5 shipments are up 5% y/y to 4.1 million MT. This is not a surprise after September's all-time record and October was not far off a record despite the decline.

Production of phosphate fertilizer (MAP and TSP) in Brazil improved again in October. Production of MAP/TSP was up 10% m/m (193,000MT) but down 3% y/y YTD to 1.7 million MT. Production of SSP was down 8% m/m (419,000MT) and down 8% y/y YTD to 3.9 million MT. Reduced production y/y is primarily due to beneficiation issues at a number of Brazilian mines and changes in demand, which are discussed below.

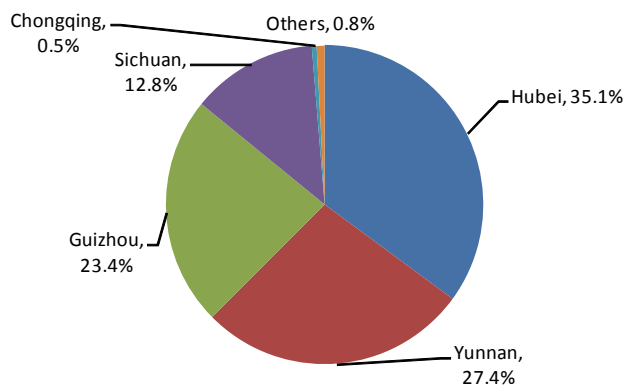

Imports of DAP/MAP/TSP decreased 31% m/m but increased 95% y/y in September (441,000MT). YTD, DAP/MAP/TSP imports are up 16% y/y primarily due to poor performance at Vale and Anglo American, the two major producers. Typically imports peak in June before trending lower but this has not been the case in 2014. SSP imports are down significantly YTD (October) this year at 539,000MT versus 828,000MT last year (-35%). However, SSP imports were up 62% m/m and 401% y/y to 95,000MT (September). November import interest was slow and due to high inventory levels, a rebound in import demand is not expected until 2015.

Fertilizer demand in Brazil has been impacted this year by the draught in the main growing areas, which has notably impacted coffee prices as well as the amount of fertilizer applied. Imported DAP/MAP/TSP require a 8-12 week lead time while SSP production (primarily local) can be left to the last moment, which has resulted in lower demand this year. Furthermore, there has been a change away from SSP application in the Cerrado region (to MAP and/or TSP + gypsum), which has also contributed to an overall reduction in SSP demand and production. Lastly, internal logistics costs (road, 600-1800km) have been significantly high in Brazil this year (~US\$90+/t) versus Argentina (~US\$20/t), which has dampened SSP imports on the east coast.

Monthly Phosphate Focus: China is a Major Producer but Focused on the Downstream

China is currently the largest producer of phosphate rock in the world at ~77 million tpa. There are 5 major phosphate formations in China (accounting for ~75% of total reserve), located in Hubei, Guizhou, Hunan, Sichuan and Yunnan provinces.

H1 2011 Main Phosphate Ore Production Areas in China

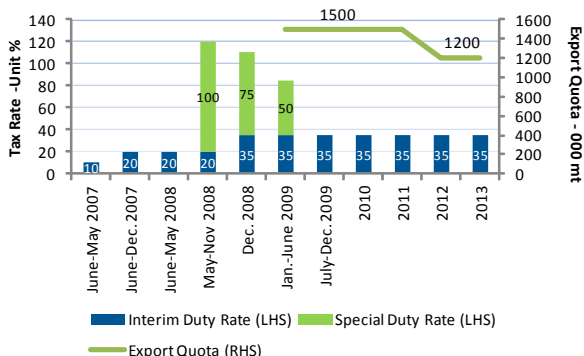

Source: CCM International

Phosphate rock production in China has grown significantly (~3x) over the past 20 years although growth is expected to slow. The 12th 5-year plan (2011-2015) indicated phosphate rock production of 75 mln tpa by 2015, which is slightly below where production is today. As with other resources in China, the government is focused on rationalizing the number of players (M&A), building the downstream/value added operations (notably for export), and focusing on environmental issues. In 2012, China's phosphate production was further concentrated in four provinces y/y (79% vs. 74% in 2011). The Chinese government is focused on making the top 10 phosphate producers represent 50% of output, shifting 1.5 mln tpa of thermal process capacity to wet process and raising the utilization rate of low grade phosphate ore for fertilizer use.

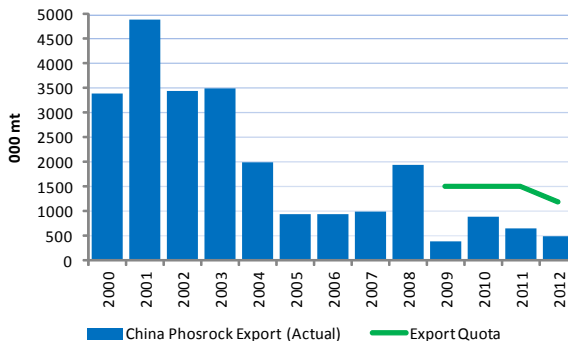

We therefore expect most of the phosphate rock capacity growth in China to service the growing downstream industry, as is the case with other major phosphate producers, notably OCP. We believe this is evidenced by the reduced exports and proportionately low and declining export quota. Phosphate rock exports have declined from ~5 mln tonnes in 2001 to ~0.5 mln tonnes in 2012. In

2010 and 2011 MOFCOM set quota at 1.5 mln tonnes (primarily to South Korea and Japan) and for 2015 it has been reduced to 1 mln tonnes. Note in the charts below that Chinese exports have been below quota.

Chinese Phosrock Tax and Export Quota; China Phosrock Exports

Source: PHOSCN

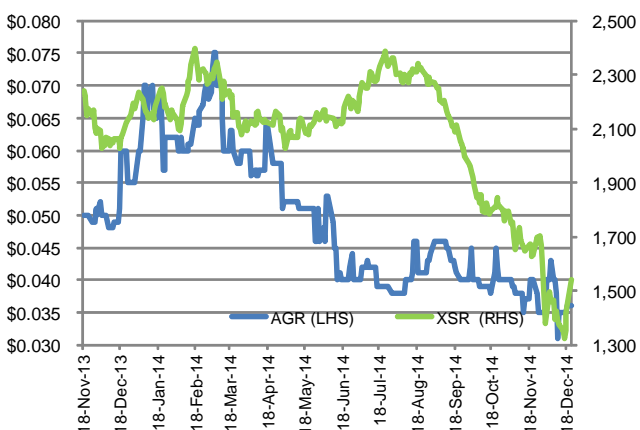

Source: PHOSCN, PhosAgro

In contrast, China has increased its DAP exports, primarily driven by recent changes to the export policy, which included lower taxes and a longer export window in the low season. In 2014, export taxes were decreased significantly – down to 0% (+\$8/MT export fee) in the low season (May 16-Oct 15) (was 5%) and down to 15% (+\$8/MT export fee) in the high season (Oct 16-May15) (was 75%). YTD October, China DAP exports were 3.5 million tonnes versus 2.9 million tonnes in 2013 (+20% y/y). China is a major producer of DAP (18-46-0) and “DAP light” (16-44/45-0).

Of note, Brazil is a major importer of MAP. YTD August, Brazil imported 2.1 million tonnes of MAP versus 0.5 million tonnes of DAP (1.7 million tonnes versus 0.6 million tonnes, respectively, in 2013).

Agua is currently focused on the flagship Rio Grande phosphate deposits in Rio Grande Do Sul (RS) state in south Brazil. The area is an established farming area (wheat, rice, soybean, corn, dry beans and lesser quantities of sugar cane and coffee) and currently imports 100% of its phosphate needs (~500,000tpa P₂O₅) as there are no existing mines operating in the area. The Rio Grande project is a collection of four new phosphate discoveries – Três Estradas (Nov 2011), Joca Tavares (June 2013), the Porteira target and the Cerro Preto target. The current focus is Três Estradas (TE), which has a 10MT indicated and 21MT inferred JORC resource (5.03% and 3.94% P₂O₅, respectively) with only 45% of the mapped strike length drilled to date. Joca Tavares

(JT) is the second discovery approximately 40 km to the south. The site has excellent infrastructure (TE is less than 1km from all railway links to the Rio Grande port – one of only two ports in Brazil with an acid terminal).

Recipients of this document should carefully consider whether the securities issued by the Company are an appropriate investment for them in light of their personal circumstances, including their financial and taxation position.

Competent Persons Statement

The information is extracted from the report entitled Diamond and Reverse Circulation Drilling released on 13 November 2014, Quarterly Report and Appendix 5B released on 31 Oct 2014, Aguiá Secures \$2m Placement released on 20 Oct 2014, the Tres Estradas Phosphate Project released on 29 May 2014, the Mining Study – Tres Estradas Phosphate Deposit released on 16 September 2014, the New High Grade Phosphate Mineralization released on 8 October 2014 and the Funding Update released on 25 September 2014, which are available to view on www.aguiaresources.com.au. The company confirms that it is not aware of any new information or data that materially affects the information included in the original market announcements and, in the case of estimates of Mineral Resources or Ore Reserves, that all material assumptions and technical parameters underpinning the estimates in the relevant market announcement continue to apply and have not materially changed. The company confirms that the form and context in which the Competent Person's findings are presented have not been materially modified from the original market announcement.

As previously announced in the March 2014 Quarterly Report to the ASX, the Três Estradas Phosphate Project has a current JORC compliant inferred and indicated mineral resource of 30.5 @ 4.24% P2O5 (total initial contained phosphate of 1.23Mt P2O5). This includes indicated resources of 9.9Mt @ 5.03% P2O5 and inferred resources of 20.6Mt @ 3.93% P2O5. The Company has also identified (and as also announced in the March 2014 Quarterly Report to the ASX) an exploration target of between 13 and 27 million tonnes, grading at between 3.56 and 4.84% P2O5 for the Três Estradas South tenement. The company confirms that it is not aware of any new information or data that materially affects the information included in the original market announcements and, in the case of estimates of Mineral Resources or Ore Reserves that all material assumptions and technical parameters underpinning the estimates in the relevant market announcement continue to apply and have not materially changed. The company confirms that the form and context in which the Competent Person's findings are presented have not been materially modified from the original market announcement. The information in this report that relates to Exploration Targets is based on information compiled by Dr Fernando Tallerico, a Competent Person, who is a Member of the Association of Professional Geoscientists Ontario, a 'Recognised Professional Organisation' (RPO) included in a list that is posted on the ASX website from time to time.
